Dear Hiring Manager at Blue Zebra,

2 September 2026

I am a software engineer with a strong track record in designing and delivering robust, full-stack solutions that align directly with the needs of your team at Blue Zebra. With hands-on experience across C#, Python, and TypeScript, I have built and maintained scalable platforms—from digital advertising systems to customer loyalty applications—while consistently focusing on performance, security, and reliability. My background in analysing business requirements, developing RESTful APIs, and integrating cloud services enables me to contribute from day one.

In my recent roles, I have architected systems that reduce API latency by up to 45% and automated infrastructure with Terraform and CI/CD pipelines, cutting deployment effort by 60%. I am equally adept at working within agile environments, maintaining clear technical documentation, and mentoring colleagues. I take pride in applying software engineering best practices such as version control, code reviews, and design patterns to deliver high-quality outcomes that meet both functional and regulatory requirements.

I am particularly drawn to Blue Zebra's mission of combining specialist judgement with modern platform capability, and I would be excited to bring my skills in cloud-native development, database optimisation, and cross-functional collaboration to your team. I thrive in workplaces that value clarity, confidence, and connection, and I am eager to contribute to building smarter insurance solutions that deliver real value to Australians.

Sincerely,

Scott Zhang
